FLIGHT SCOPE PERFORMANCE FITTING MENU

Fitting Services And What To Expect:

ALL FITTINGS ARE PERFORMED OUTDOORS TO SEE TRUE BALL FLIGHT AND FEEL TURE INTERACTION with a FlightScope launch monitor.

Upon arrival we will do a quick evaluation of their current equipment (loft, lie, length, shaft frequency and swing weight). During this time the player will be able to warm up on the range. When the fitting begins, we will have the player hit a series of shots to gather data on FlightScope launch monitor and determine baselines for the players swing and tendencies. At this time the player will then test numerous shaft and head combinations until the proper fit and set make-up is met. Measurements for club length, lie angle, grip size and weight will also be taken.

Upon completion of the fitting the player will receive a detailed analysis of the fitted equipment along with a price breakdown for the custom build. Since everything we do at Ancil Hoffman Performance Fittings is 100% custom, pricing is done based on each individual manufactures component (head, shaft & grip). Purchasing the fitted equipment is coordinated through the players personal club fitter and all clubs are custom built to spec by OEM's and will arrive in 2-10 days .

Call the Golf Shop @ 916-482-3813 to schedule a flight scope fitting .
